

## Radiorobot

Radiorobot was formed to be an innovative design/build prototyping company. We cut our teeth working in the industry and have experience with many production tools and methods. Our jobs have ranged from prototypes for inventors, precise mechanical apparatus for kinetic sculptors, to challenging 3-d models for mold makers. Our decision to add a CNC router was based on our need not only for a CNC machining center, but one that could handle a range of creative situations. We knew that we needed a machine that was solid, flexible and above all a serious production tool. FlexiCAM met that need, and did so with the dedicated support of a kind knowledgeable staff that has stood behind their product when we needed them to be there.
